Allowable Subject Matter

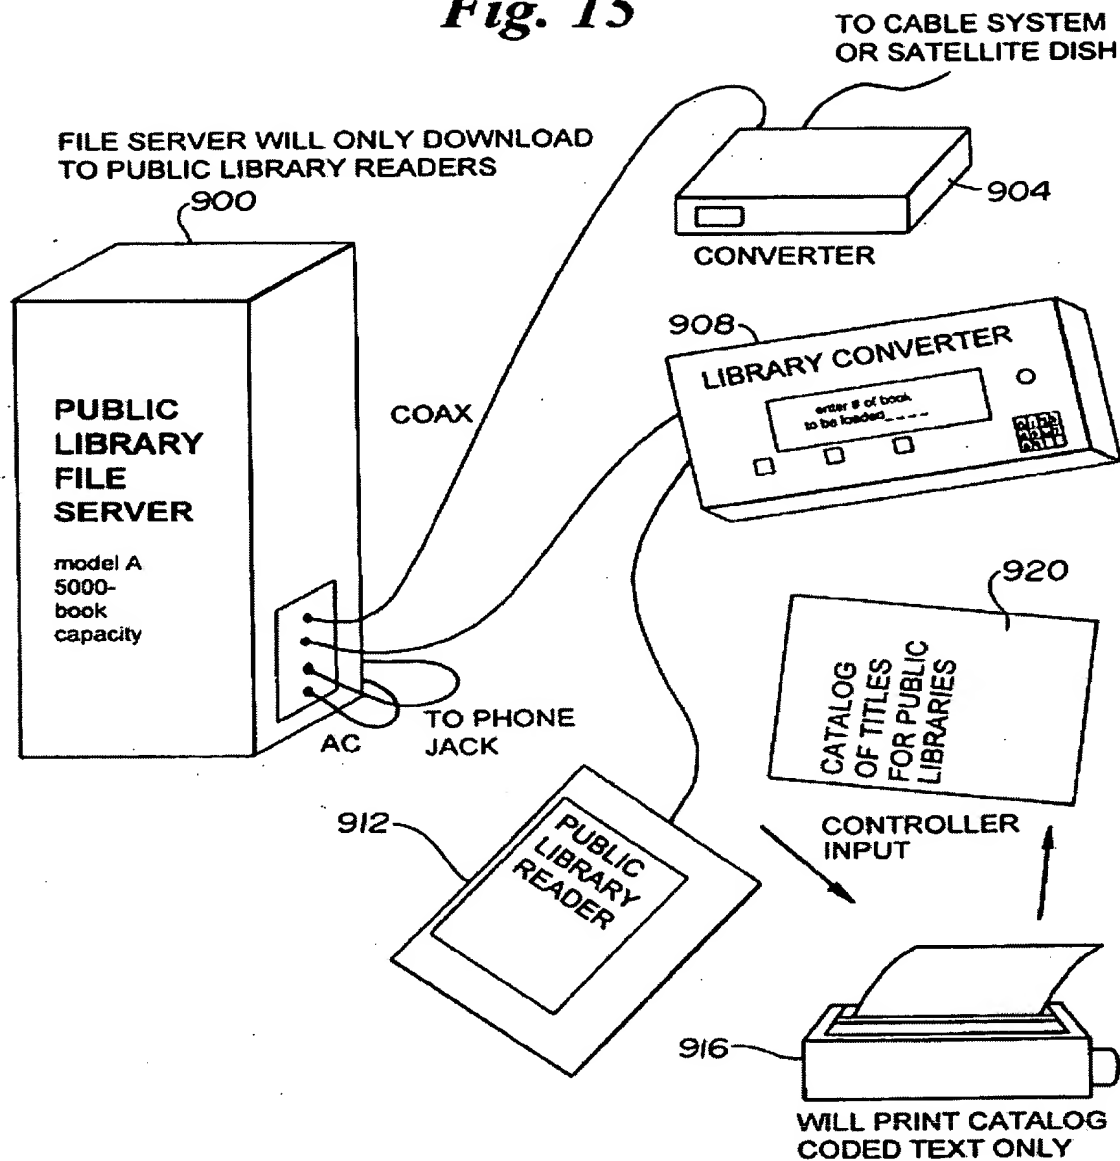

1. Claims 1-9, 11-20, and 22-29 (renumbered 1-27) are allowed.
2. The following is an examiner's statement of reasons for allowance:

The closest prior art of record issued to Tschiya (U.S. Patent Number 5,239,665) disclosed a method of transmitting electronic books from a server ("file server") containing electronic books to an electronic book ("viewer") via telephone line, using RF (radio frequency) and through the means of removable memory medium. The viewer optionally downloads the electronic book at its internal memory medium and further displays the content pages of the downloaded electronic book via the user interface (display window). See Figure 6 (also disclosed below), Column 6, Lines 7-16 and Column 6, Lines 45-54.

However, prior to 11/18/1994, none of the prior art of record taken singularly or in combination teaches or suggests a method or system of accessing an electronic book from a file server **in combination with the functional limitation** having therein a means for determining the number downloaded/stored electronic books at viewer ("public library reader" See Fig. 15 also disclosed below) and if the number of downloaded/stored electronic books is over a predetermined limit, preventing the viewer from downloading additional electronic books from the server. The structural functionality of this limitation make use of a controller device ("library converter" See Fig. 15 Reference # 908) connected to the file server ("public library file server" See Fig. 15 Reference # 900) and the viewer device, the controller device having therein an input unit for entering the limit of electronic books to be downloaded/stored in to the memory of only authorized viewer devices to download the electronic books from the file server. This functionality is supported by the specification. See Fig. 11, Fig. 15 (also disclosed below), Page 17 Lines 14-21 and Page 23 Line 23 through Page 24 Line 17.
